- Design and Planning
- Material Selection
- Prototyping
- Production
- Quality Control
- Distribution

Each step is vital to ensure the final product meets specifications, safety standards, and consumer expectations.

From Raw Materials to Components: The Foundation of Manufacturing

Raw Material Extraction and Processing

Every manufactured product begins with raw materials, which can be natural (like metals, plastics, wood) or synthetic (like chemicals for plastics). The extraction and processing stages are critical and vary depending on the material:

- Mining and Quarrying: For metals such as iron, copper, and aluminum, extraction involves mining ores from the earth. For example, iron ore is mined and then processed to produce steel.
- Forestry and Agriculture: Wood for furniture and paper products is harvested, then dried and treated. Cotton or synthetic fibers form textiles.
